

Windows Tools

Install chocolatey from the instructions given in the link below.

<https://chocolatey.org/docs/installation>

Run all the below commands on Powershell ([Open Powershell as Admin](#))

choco install virtualbox
choco install vagrant
choco install git
choco install jdk8
choco install maven
choco install awscli
choco install intellijidea-community
choco install sublimetext3.app

MacOS Tools

Install brew from the instructions given in the link below.

<https://brew.sh/>

After installing homebrew

Create a file in users home directory with name .curlrc with content “-k”
(-k without quotes and give a new line character after -k.)

Steps:

1. Open Terminal
2. echo -k > ~/.curlrc
3. cat ~/.curlrc

Run all the below commands in Terminal

```
brew install --cask virtualbox (Not For MacOS M1)
```

```
brew install --cask vagrant
```

```
brew install --cask vagrant-manager
```

```
brew install git
```

```
brew install openjdk@8
```

```
brew install openjdk@8
```

```
brew install maven
```

```
brew install --cask intellij-idea
```

```
brew install --cask intellij-idea-ce
```

```
brew install --cask sublime-text
```

```
brew install awscli
```
